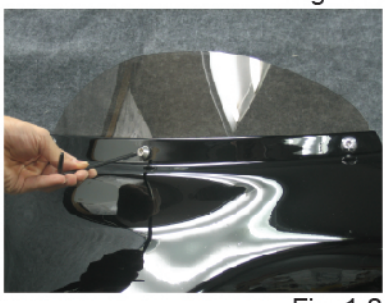

Fig. 1-2

Fig. 1-3

Part 1. Installation of Flat or Curvy windshield

Refer to Fig. 1-1 to 1-3
(For Fairing with Boox windshield, please go to the next page)
(For Fairing without windshield, please go to Part 2 or Part 3)

1. Carefully place the fairing on protective material to avoid scratches.

2. Loosen or completely remove the three hex bolts on top of the fairing, complete removal of these three hex bolts will result in easier installation of the windshield and help avoiding damage to the seals between the inner and outer fairings.

3. Loosen the bottom two bolts, but not complete removal.

4. Remove protective plastic sheets on the windshield.

5. Carefully insert the windshield between the inner and outer fairings, beware of dislodging the seals on both inner and outer fairings.

6. Align the windshield slots to the windshield mounting holes on the fairing and make sure the windshield is all the way down.

7. Tighten the three hex bolts on the top and the two bolts at the bottom.

Part 2. Installation with Tsukayu brackets and hardware kit
